

Leva.Framework.Sample.LiveDashboard

Web sample for Notifications.SignalR with a memory-backed visible history. It sends framework notifications to the browser in real time and shows stored notification entries separately.

```
Leva.Framework.Sample.LiveDashboard
    -> Leva.Framework.Core
    -> Leva.Framework.Notifications
    -> Leva.Framework.Notifications.Memory
    -> Leva.Framework.Notifications.SignalR
    -> Microsoft.AspNetCore
```

Setup shown by the sample

```
Program.cs
    -> registers QueryStringUserIdProvider for demo user mapping
    -> calls AddSignalRNotifications() for the SignalR gateway and hub
    -> registers MemoryNotificationStore as the sample history store
    -> registers NotificationService explicitly
    -> maps MapSignalRNotifications()
    -> maps dashboard endpoints

DashboardNotificationHistory
    -> reads the concrete MemoryNotificationStore used by the page
    -> exposes small dashboard DTOs instead of raw framework objects
```

Behavior shown

```
Browser connects as user demo

POST /dashboard/notify -> NotificationService -> SignalR gateway -> browser receives
message

MemoryNotificationStore -> stored history shown by Refresh stored history
```

The browser has two separate views:

```
Live notifications -> messages received through SignalR in the current browser tab
Stored history      -> notification entries stored on the server
```

Clear page view only clears the browser display. It does not clear the server-side memory store.

Refresh stored history reads the server history again and re-renders the history list. The sample host sets a short shutdown timeout so Ctrl+C stops quickly even with an open SignalR connection.

Run and expected result

```
dotnet run --project samples/Leva.Framework.Sample.LiveDashboard
```

```
Connected to SignalR as user demo.
```

```
Send notification -> Notification sent.
```

```
Refresh stored history -> Stored history refreshed with N entries.
```

```
Clear page view -> Page view cleared.
```

```
Run self-check -> Self-check passed.
```
