

Leva.Framework.Sample.StateCounter

```
1  using Leva.Framework.Sample.StateCounter;
2
3  var builder = WebApplication.CreateBuilder(args);
4  var app = builder.Build();
5
6  // The host is intentionally thin; the sample workflow composition lives in StateCounterRunner.
7  app.UseDefaultFiles();
8  app.UseStaticFiles(
9      new StaticFileOptions
10     {
11         OnPrepareResponse = context =>
12         {
13             // Samples change often while developing, so disable browser caching for local static
14             context.Context.Response.Headers.CacheControl = "no-store, no-cache, must-
15             revalidate";
16             context.Context.Response.Headers.Pragma = "no-cache";
17             context.Context.Response.Headers.Expires = "0";
18         },
19     };
20 app.MapGet("/favicon.ico", () => Results.NoContent());
21
22 app.MapPost(
23     "/workflow/run",
24     async (Cancellation token) =>
25     {
26         // The browser calls one endpoint so the sample can show the complete Engine and Execution
27         flow.
28         var result = await StateCounterRunner.RunAsync(token);
29         return Results.Ok(result);
30     });
31
32 app.Lifetime.ApplicationStarted.Register(() =>
33 {
34     Console.WriteLine("StateCounter sample");
35     Console.WriteLine("Open the printed local URL and click Run workflow checks.");
36 });
37
38 app.Run();
39
```
